Sponge Planet: Nature-Based Solution for Global Climate

As climate change intensifies floods, droughts and extreme rainfall, conventional grey infrastructure alone can no longer provide sufficient resilience or recovery capacity. This lecture introduces *Sponge Planet*, a nature-based solutions framework rooted in integrated soil and water governance through natural processes. Combining ecological reconstruction, green and grey infrastructure integration, and eco-technological strategies, the framework enhances climate adaptation, disaster mitigation, and post-disaster recovery. Drawing on over 1,000 projects by Turenscape over 28 years, the lecture demonstrates how natural systems can strengthen resilience across diverse environmental and urban contexts.
